What drove the recent outflow in tech ETFs in Hong Kong?

Tech ETF outflows were driven by valuation reset and macro pressure from US rates and weak earnings outlook in semiconductors.

Sources: Market Intelligence, Holdings, SP Data

Key Insight

Rotation from growth to dividend strategies is accelerating.

PLATFORM NAVIGATION OVERVIEW

Page Structure

Platform Navigation Overview

End-to-end page tree for the ETF intelligence platform.

- Navigation hierarchy
- Module overview
- Functional mapping
- UX architecture

CORE MODULES

Four Core Intelligence Layers

The next section walks through the platform's four major functional domains, from market research to product discovery.

01

Market Intelligence

What is happening in the market?

ETF signals, breadth, themes, and rankings form the research entry point.

02

Portfolio Intelligence

What does it mean for my holdings?

Portfolio analysis translates market data into exposure, concentration, and risk insights.

03

AI Advisory

How should users interpret the data?

AI guidance helps connect signals, holdings, and product context into explainable insights.

04

Structured Products

What opportunities exist beyond ETFs?

Structured product research expands the platform into term sheets, product details, and comparisons.

Market Intelligence Workspace

A unified workspace for market research, analytics, screening, watchlists, ETF detail, and comparison workflows.

01 Market Overview

Market breadth, flows, and rankings

No real-time trading feed

02 Sector Themes

Themes, sectors, and performance

Research entry, not a recommendation

03 Market Indices

Key indices and performance

Simulated / delayed data for prototype

04 ETF Screener

Filter and discover ETFs

Not connected to Level II data

05 My Watchlist

Your curated ETFs

For research focus only, no alerts

06 ETF Detail

Deep dive into an ETF

HKEX delayed disclosure

07 ETF Compare

Compare performance and key metrics

Prototype limited to 2 ETF comparison

Key Metrics

Metric	ETF A	ETF B
YTD Return	12.45%	15.32%
Volatility (1Y)	18.36%	16.21%
Sharpe Ratio	0.68	0.62
Max Drawdown	-12.59%	-10.23%
AUM (HKD)	68.6B	32.7B

DATA & CONTENT PRINCIPLES

Delayed Data First

All market data is delayed or simulated for research purposes.

Research-Oriented

Designed for investment research, not for trading execution.

Comprehensive Coverage

ETF overview, sectors, indices, screening, analytics and comparison.

User-Centric

Personal watchlist and intuitive tools to streamline research workflow.

Secure & Controlled

Role-based access. Admins functions are fully controlled.

LEGEND

→ User Journey

ETF Market Overview

This page opens after tapping the dashboard overview card. It turns a broad market signal into a more detailed decision-support view for distribution and rankings.

01 Return Distribution

Before diving into individual products, users need a quick sense of how the ETF universe is distributed across loss, flat, and gain buckets. This chart summarizes market breadth at a glance.

02 ETF Rankings

Once users understand the distribution, they often want to identify top movers or the most actively traded ETFs. Rankings can be viewed by return or by volume, so users can switch between performance leadership and trading activity.

	Return	Volume
1	CSOP Hang Seng Tech Index ETF	+2.40%
2	iShares Hang Seng Tech ETF	+2.36%
3	ChinaAMC Hang Seng Tech ETF	+2.23%
4	Tracker Fund of Hong Kong	+1.15%
5	Hang Seng China Enterprises ETF	+1.51%
6	iShares US Treasury Bond ETF	+0.12%
7	iShares Core MSCI Asia ETF	-0.08%
8	Vanguard FTSE Asia Pacific ETF	-0.33%
9	SPDR Gold Trust ETF	-0.34%

Focused List Views

These are list surfaces, so they work best as a horizontal comparison: each list answers a different narrowing intent.

Purpose-built lists.

Each surface is optimized for a specific decision: explore sectors, revisit saved interests, or scan the full universe.

Narrow with intent.

Filters let users focus by asset class, region, strategy, sector, volume, or return—so every list is relevant.

Compare with clarity.

Clean rows and consistent metrics make horizontal comparison effortless, so patterns stand out quickly.

Act and continue.

From any list, users can open details, add to watchlist, or compare—without losing their place.

01 Sector Detail

Drill into a sector to see its ETFs ranked by performance or liquidity. Ideal for discovering leaders within a theme.

02 My Watchlist

A personal list of saved ETFs for quick monitoring. Reopen familiar ideas anytime without starting a new search.

03 All ETFs Screener

The full ETF universe with powerful filters for asset class, region, strategy, sector, volume, and return.

ETF Detail View

Everything you need to evaluate an ETF—price context, fundamentals, news, and market status—in one focused view.

Key stats & risk context

Price alone is not enough. See volume, AUM, flows, expense ratio, holdings, beta, and other key facts to assess the ETF with fuller context.

Key stats

Scroll down to view key stats like volume, flows, holdings, expense ratio, beta, and more.

Volume	1,20M HKD
Average volume (20D)	429M

ETF Comparison

Compare ETFs side by side on price performance, key metrics, and factsheet attributes to make confident, explainable decisions faster.

01

Select comparison candidate

Users first choose a second ETF from a searchable compare list. The selector surfaces ticker, product name, and 1Y return so users can pick a relevant benchmark quickly.

02

Normalize performance

Both ETFs are rebased to the same starting point so users compare direction and consistency rather than different price levels.

03

Align key decision factors

Return, expense ratio, and comparable metrics are placed side by side so users can evaluate performance, cost, and structure in one pass.

04

Support explainable decisions

A structured comparison makes it easier to justify why one ETF may fit a goal, risk tolerance, or theme better than another.

Market User Stories

Real user journeys that deliver insight, clarity, and decision support.

Risk & Diversification Focus

Concentration and exposure made visible.

Selectable Diagnosis Scope

Users control which issues to address.

Action-Oriented Suggestions

Recommendations shown through before/after improvements.

Portfolio insights only • diagnosis-driven • optimisation guidance

Portfolio Entry

Start with what you have

Flexible intake accepts messy, real-world sources—photos, documents, CSV, or paste.

A review step before analysis protects accuracy and builds confidence from the start.

Add ETF and structured product

Manual entry stays available for incomplete statements, quick edits, or custom constructions.

ETF and structured product paths are separated—search behavior and suitability differ—yet both feed the same draft portfolio.

Search and add holdings

Find and add ideas in-flow—turn discovery into positions without leaving Portfolio. Structured products show suitability context up front for informed decisions.

Ready for draft portfolio

The draft portfolio is a review checkpoint before diagnostics. Confirm sizing, catch issues early, and build trust in the analysis that follows.

Portfolio Analysis

Turn holdings into explainable diagnostics before moving into recommendations.

01 Portfolio dashboard

The top summary gives users a fast read of overall portfolio health before they dive deeper. Risk score, HHI, Effective N, and category scores make concentration and diversification visible early.

03 Exposure before diagnosis

Exposure is shown before diagnosis so users first see what is driving risk across sector, region, and currency. The diagnosis layer then translates those patterns into concrete issues.

02 Attribute detail & related diagnoses

Tapping an attribute opens a focused detail view with key metrics and related diagnoses, so users can understand why a score looks the way it does and manage diagnosis scope from the attribute level.

04 Diagnosis scope control

All diagnoses are selected by default to provide a complete starting point. If you disagree with any diagnosis, simply deselect it. The same diagnoses can also be deselected from related attribute-detail views, and the selection state stays synced across both places.

Portfolio Suggestions

Selected diagnoses become measurable optimisation paths and product-level actions.

1 Selected diagnosis scope

The flow begins by restating only the diagnoses you kept selected, so the optimisation stays transparent, traceable, and clearly tied to your chosen problem scope.

2 Before / after evidence

We quantify expected change before you act. The comparison table shows how key metrics improve across concentration, diversification, and exposure—so recommendations are backed by measurable outcomes.

3 Specific actions

Each action card turns a selected diagnosis into a concrete move—add, reduce, or increase—with target weights and rationale, making the output reviewable and ready for discussion.

Portfolio User Stories

Real user journeys that turn portfolio complexity into clarity and confident decisions.

Advisory Assistant Overview

Conversational intelligence that connects market knowledge with your portfolio context to deliver clear answers and actionable insights.

Ask naturally
in your own words

Get intelligent
portfolio-aware answers

Refine and rerun
with feedback

Act with confidence
on clear insights

01

Choose How to Focus

Start with a default mode or create a custom focus.

Value focus

Income focus

Custom focus

02

Ask Anything

Ask a question using natural language or pick a suggestion.

What is the concentration risk in my portfolio?

Which ETFs have the best risk-adjusted return?

What are the main risks in a Capital Protected Note?

03

Get AI-Powered Insights

Receive clear, contextual answers grounded in market data and (optionally) your portfolio.

Portfolio context
On or Off

04

Refine and Give Feedback

Rerun for alternatives and rate responses to improve future answers.

Rerun for alternative answer

05

Act with Confidence

Use insights to compare options, validate ideas, and make smarter decisions.

Compare options

Validate ideas

Make decisions

Core Capabilities

Natural Conversation

Ask anything in plain language.

Portfolio Awareness

Leverage your portfolio history when you choose.

Smart Intelligence

Combine market data, models, and reasoning.

Iterate and Improve

Rerun, refine, and provide thumbs feedback.

Secure by Design

Your data stays private, secure, and protected.

Advisory Assistant

A guided research copilot that combines market, portfolio, and product context into conversational exploration.

Mode-led entry

Default modes such as Value focus and Income focus give users an immediate framing lens, while starter questions reduce blank-page friction and help users understand what the assistant can answer.

Portfolio context is explicit

The context toggle makes portfolio grounding intentional—users decide whether the assistant should reference portfolio history, so the conversation can stay either general or portfolio-aware.

Create a custom focus

Write instructions

Guided setup

When default modes are not enough, users can either write a prompt brief or fill a short questionnaire, making personalization flexible without increasing setup friction.

Feedback-aware response loop

I've received your query: "What is the concentration risk in my current portfolio?".

I am currently analyzing your sandbox assets. For a full analytical rebalancing breakdown, please try typing keywords like **value**, **income**, or **HHI**, or trigger one of the quick options above.

Each response is designed as a reusable research turn—users can rerun, refine, or rate the output, helping the assistant improve while keeping the workflow iterative and explainable.

Conversation Continuity

Research threads stay reusable so users can revisit earlier work, start clean threads, or bring documents into follow-up questions.

01

Revisit prior threads

Named sessions make previous work scannable and easy to reopen without starting over.

02

Continue or restart

Start a clean thread when a new topic should branch away from an existing analysis, keeping research organized.

03

Upload PDFs for follow-up

Documents can be added into the thread so follow-up questions stay grounded in source material.

Session memory

Searchable history

Document-aware

Follow-up ready

Thread control

Advisory User Stories

Real user journeys that turn AI interaction into structured advisory support.

A-1

User

Ask Questions through Chat

NEED

Choose Value, Income, or Custom modes; configure portfolio context or attachment tools; enter a question; receive structured suggestions plus detailed explanations.

VALUE

Obtain traceable research support under different investment preferences, with follow-up questions and context continuity.

1 Choose advisory mode

2 Add portfolio context or attachment

3 Ask a question

4 Receive structured suggestions

5 Open detailed explanation

6 Continue with follow-up chat

A-2

User

Review Conversation History

NEED

Open History Drawer, browse past conversations, and restore any conversation into the current chat.

VALUE

Support review and continuation of prior advisory context.

1 Open History Drawer

2 Browse conversation list

3 Inspect past thread

4 Restore selected conversation into current chat

A-3

User

Create Custom Mode

NEED

Top plus to create a custom mode by writing a prompt or completing a guided survey covering horizon, risk preference, and return objective, save it to the mode list.

VALUE

Let users tailor AI advisor behavior to personal investment needs.

1 Tap plus to create custom mode

2 Choose prompt-based or guided setup

3 Define horizon, risk preference, and return objective

4 Save to mode list

5 Use the custom mode in future advisory chats

Structured Products Workspace

A screening and review workspace for discovering issuer notes, narrowing opportunities, understanding payoff structures, and checking supporting documents before discussion.

screening focus only • payoff understanding • suitability-aware review

Structured Products Entry

Built for issuer-led discovery with smart filters and advanced search to find the right ideas faster.

01 Issuer list

Start from familiar issuer relationships to discover ideas with confidence.

02 Smart filters

Use lightweight filters for a quick first pass before diving deeper.

Overview—Full Product Context

See the complete picture—key terms, reference details, and outcomes—so you can evaluate with clarity.

Overview Summary

A high-level snapshot of the product structure and payoff profile to quickly understand what it is and what drives the returns.

Return Features

Shows the key structural features that determine how returns are triggered and under what market conditions.

Reference Information

Provides the essential identifiers, key dates, and product status—so you can verify authenticity and track the product over time.

Key Terms

Lists the core terms that define the product—structure, underliers, eligibility, issuer and more—so you know exactly how it's constructed.

Illustrative Outcomes

We design three clear scenarios to map the full range of possible results:

- **Coupon paid (Upside):** Both underliers stay strong—full coupon is paid and principal returned.
- **Base settlement (Middle):** Temporary weakness but recovery by maturity—coupon still paid.
- **Principal loss risk (Downside):** Sustained decline beyond the barrier—investor bears stock loss via physical delivery.

Risk Disclosure

Highlights the key risks upfront so you can quickly assess whether the product aligns with your risk tolerance.

Performance & Compare View

Dive deeper into pricing details and compare similar ETFs—so you can make better-informed decisions.

01 Performance Summary

Snapshot of key metrics—price, P&L, status, and watch levels—helping you quickly assess the ETF's current standing.

02 Pricing Snapshot

Shows when and how the price was set, plus yield and payment details—for full pricing context.

03 Price Performance

Scenario-based outcomes across Bear, Flat, Base, and Bull—helping you understand potential returns across different market conditions.

04 More Insights

Quick access to related products, watch points, and pricing disclaimer—everything you need, right where you are.

05 Compare Button

Jump to the Compare view instantly to see how this ETF stacks up against similar options.

COMPARE VIEW (opens on tap)

Side-by-side Comparison

Key product attributes lined up side by side for fast evaluation.

Smart Matching

Compares with products from the same issuer to keep options relevant.

Easy to Switch

Change the selected product anytime to explore other alternatives.

Consistent Context

All key details in one place—helping you decide with confidence.

Note Events View

Understand how the note can pay, what triggers matter, and how each scenario maps to payoff.

01

Rule Summary

Plain-language breakdown of payoff rules—earn, lose, and watch—so users quickly understand the key outcomes.

02

Event Schedule

Table of key event dates and levels including call frequency, payment frequency, autocall threshold, and barrier.

03

Outcome Selector

Switch between the three scenarios to see how each payoff outcome works.

THREE SCENARIOS, ONE VIEW

Switch scenarios to see how the note performs in different market conditions.

Coupon paid

SELECTED: COUPON PAID

Indicative probability: 30%

HSI gains 25%; 85% participation delivers 21.25% return. Principal fully returned.

Base settlement

SELECTED: BASE SETTLEMENT

Indicative probability: 45%

HSI gains 10%; 85% participation delivers 8.5% return on top of protected principal.

Principal risk

SELECTED: PRINCIPAL RISK

Indicative probability: 25%

HSI declines or flat; 100% capital protection returns full principal. No gain.
