Investment Intelligence Prototype

PRODUCT FOUNDATION

Review first.
Execution out.

-  INTENT
-  EVIDENCE
-  EXPLAIN

From broad question to reviewable object, with no order path inside the prototype.

Market

01

DISCOVERY LAYER

ETF breadth, sector themes, Daily Hot, and rankings help users decide what deserves attention first.

Portfolio

02

CONTEXT LAYER

Holdings and risk views connect market movement to the user's own exposure.

Assistant

03

EXPLANATION LAYER

AI turns screen evidence into a readable rationale without replacing reviewer judgment.

Products

04

COMPARISON LAYER

Structured-product and ETF comparison pages organize terms, metrics, and trade-offs.

DESIGN RULES

Evidence first

A page should show the data, chart, list, or context before asking the user to interpret it.

Progressive depth

Start broad on dashboard, then let cards open focused pages with more detail.

Role clarity

Separate user and admin paths.

Clear boundary

The prototype supports review and explanation, not buy/sell execution or guaranteed advice.

Architecture & Control Layers

The PRD architecture connects the iOS client, security module, four intelligence modules, shared data foundation, Admin configuration, and external data sources.

Client

iOS Client built with SwiftUI communicates through HTTPS / JSON.

Core Modules

Market, Portfolio, AI Advisory, and Structured Products share a unified data layer.

Control

Security, Admin configuration, public APIs, and uploaded documents define the operating boundary.

Page Structure & Module Directory

The page tree shows where each prototype state sits; the directory keeps module ownership and review scope visible on one slide.

Market Intelligence Scope

Market Intelligence is designed as a browsing and discovery layer, not a trading terminal.

01

STARTING MAP

Dashboard

Overview, sectors, Daily Hot, indices, watchlist, and All ETFs entry.

02

MARKET READ

Daily Overview

Return distribution plus ETF rankings by return or volume.

03

FOCUSED DISCOVERY

Sector Detail

Related ETFs grouped by sector, sortable by return or volume.

04

UNIVERSE SCAN

All ETFs

Search, count, filters, ETF rows, performance badges.

05

PRODUCT INSPECTION

ETF Detail

Identity, price horizon, chart, overview, news, and compare entry.

06

DECISION SUPPORT

ETF Compare

Two-product context, normalized curve, and aligned metrics.

Boundary

No execution path, no order placement, no recommendation label.

Dashboard Entry

The dashboard is the entry map. Each major block is clickable and opens a more focused browsing or discovery page.

01 **ETF Market Overview**

The daily market entry. It opens return distribution and ETF rankings before a user chooses a single product.

02 **Default sectors**

Stable research categories. They keep recurring market browsing predictable across review sessions.

04 **Watchlist preview**

Saved-interest shortcut. View all opens the full watchlist page without forcing a new search.

05 **All ETFs**

The top-right workbench entry for searching and filtering the full ETF universe.

03 **Daily Hot**

Dynamic top themes for the day. Tapping one opens its related ETFs, ordered by return or volume.

ETF Market Overview

This is what opens after tapping the overview card: a broader daily market read before the user chooses a specific ETF.

01 Return distribution

Shows how the ETF universe is spread across return buckets today.

02 ETF rankings

Daily winners and laggards are listed below the chart for fast browsing.

03 Return / volume sort

Users can switch between performance-led and liquidity-led discovery.

04 View more ETFs

Continues the same browsing path into the full All ETFs screener.

Sector Detail

This is what opens after tapping a Default Sector or Daily Hot tile: all related ETFs are collected into a focused sector list.

Default / Daily Hot tileTap

Filtered sector listCurrent

ETF rowETF Detail

01Sector context

The title and subtitle explain the category behind the filtered ETF list.

02Return sort

Default sort surfaces the strongest ETF moves first.

03Volume sort

Volume sort changes the same list into liquidity-first browsing.

04Related ETFs

Rows are scoped to the selected sector and include volume plus daily return.

My Watchlist

This is what opens after tapping Watchlist Preview: a short saved list that lets users return to familiar ETFs quickly.

Watchlist previewTap

Saved ETF listCurrent

ETF rowETF Detail

01

Saved count

The header confirms how many ETFs are being tracked.

02

ETF identity

Ticker, theme tag, fund name, issuer, and region make each saved item recognizable.

03

Performance cue

Price and 1Y return keep the watchlist useful without becoming a trading alert.

04

Detail path

A row tap returns the user to the ETF Detail research surface.

Profile

All ETFs Screener

After the dashboard entry, the user arrives at the ETF workbench: search, scan, sort intent, and row-level selection all happen on one page.

01 Search bar

The search field supports symbol, product name, and issuer queries, because institutional users may start from a ticker, a fund family, or a rough product memory.

03 ETF row information

Each row combines ticker, name, exposure category, volume, and daily performance. This lets users scan both identity and market movement before opening detail.

02 Filter entry and result count

The count confirms scope before the list is scanned, while the filter button keeps deeper refinement one tap away without hiding the current results.

04 Performance badges

Green and red change badges make the list readable at a glance, but they remain descriptive signals rather than recommendation labels.

Filter Sheet

The filter sheet explains the product taxonomy behind the screener: it narrows the ETF universe by attributes that investment reviewers naturally compare.

ETF Detail

The ETF Detail page is the main research surface: identity, price movement, chart evidence, overview tabs, and news context are all visible before comparison.

ETF Compare

Comparison is presented as a final research step, with proof objects that support judgment without implying execution.

01

Context first

Two ETF header cards confirm which products are being compared before the user reads metrics.

02

Normalized proof

The price curve creates a shared visual baseline, because raw prices are not directly comparable.

03

Aligned metrics

Return, risk, fee, and attribute rows turn product differences into a reviewable decision-support table.

04

Boundary

The comparison still stops at research; there is no buy, sell, order, or execution path.

Market User Stories

M-1

Start from market context and open ETF detail

TRIGGER

The user wants to understand what is moving in the ETF universe before choosing a product to inspect.

- SCREEN JOURNEY**
- 01

Review breadth, sectors, Daily Hot, and indices on Dashboard Entry.
- 02

Use All ETFs or a sector card to move into the ETF list.
- 03

Open an ETF row and read price, chart, overview, and news context.

OUTCOME

The user reaches a detailed research page with enough context to discuss the ETF, without seeing any execution or order flow.

Dashboard Entry

All ETFs

ETF Detail

News context

M-2

Narrow the ETF universe with search and filters

TRIGGER

The user already has a partial idea, such as an issuer, region, sector, or asset class, but does not know the exact target ETF.

- SCREEN JOURNEY**
- 01

Search by symbol, product name, or issuer.
- 02

Open the filter sheet and refine by asset class, region, sector, issuer, currency, or sort rule.
- 03

Return to the ETF list and scan rows by exposure, volume, and performance badge.

OUTCOME

A broad research intent becomes a short, reviewable candidate list that can be opened into detail.

Market User Stories

M-3 Compare two ETFs before making a decision

TRIGGER

After reviewing one ETF, the user needs to compare it with another product that has similar exposure or a competing issuer.

SCREEN JOURNEY

- 01 Use the compare entry from ETF Detail.
- 02 Select a second ETF in the picker.
- 03 Read normalized performance, return, fee, risk, and factsheet rows side by side.

OUTCOME

The user can explain relative differences between two ETFs while the product remains strictly in research mode.

Compare picker

Normalized curve

No execution

M-4 Maintain ETF coverage as an Admin

TRIGGER

A required ETF is missing from the searchable universe, or a product list needs to be expanded for review coverage.

SCREEN JOURNEY

- 01 Enter Admin mode and use the Add ETF by ID path.
- 02 Fetch the ticker preview before adding it to the platform.
- 03 Confirm that the ETF becomes available for user-facing search and detail review.

OUTCOME

Market Intelligence remains complete and auditable while normal users never see the maintenance action.

Market Acceptance Criteria

Acceptance standard

Market Intelligence is accepted when discovery, detail research, comparison, Admin access, and disclosure states can be reviewed end to end.

01

UI Coverage

Dashboard, screener, filter sheet, ETF detail, and compare are represented as the main review path for Market Intelligence.

MUST PASS

02

User Flow

Users can enter ETF detail from dashboard / watchlist / sector context and continue into compare.

MUST PASS

03

Search Logic

Keyword, category, region, sector, issuer, currency, sorting, active badges, and result count update together.

MUST PASS

04

Comparison

Two selected ETFs show normalized curve plus aligned return, risk, fee, and attribute metrics.

MUST PASS

05

Admin Control

Add ETF by ID is visible and accessible only to Admin role, not normal User role.

MUST PASS

06

Disclosure

Market pages show delayed-data and non-execution boundaries, including HKEX 15-minute delayed-data disclosure.

MUST PASS

Review conclusion

The module is rigorous enough for prototype delivery review when the reviewer can verify screen coverage, role isolation, state handling, and compliance boundaries without relying on unstated behavior.
