Structure

01

Product Foundation

Product overview, architecture, and page structure.

02

Core Modules

Market, Portfolio, AI Advisory, and Structured Products.

03

Non-Functional Design

Security, access control, performance, compatibility, accessibility, compliance, and observability.

04

Review Focus

Scope, page coverage, journey validation, and next-step confirmation.

Investment Intelligence Prototype

The prototype is a reviewable investment-intelligence and data-maintenance system, not a trading workflow.

Architecture & Control Layers

The PRD architecture connects the iOS client, security module, four intelligence modules, shared data foundation, Admin configuration, and external data sources.

Client

iOS Client built with SwiftUI communicates through HTTPS / JSON.

Core Modules

Market, Portfolio, AI Advisory, and Structured Products share a unified data layer.

Control

Security, Admin configuration, public APIs, and uploaded documents define the operating boundary.

Page Structure & Module Directory

The page tree shows where each prototype state sits; the directory keeps module ownership and review scope visible on one slide.

MODULE DIRECTORY

Market Intelligence

Dashboard / Screener / Detail / Compare

Portfolio Builder

Input / Draft / Analysis / AI Suggestions

AI Advisory

Chat / Structured Suggestions / Conversations

Structured Products

Discovery / Detail / Compare / Admin Panel

Profile & Settings

Profile / Legal / Admin Tools / Sign Out

Review path

Use this map to locate screenshots, user stories, and acceptance criteria inside the prototype scope.

LAYER 3

Core Modules

Each module is reviewed through functional scope, page coverage, user stories, and acceptance criteria.

- 02 Product Foundation
- 03 Core Modules
- 04 **Market Intelligence**
- 05 Portfolio Intelligence
- 06 AI Advisory
- 07 Structured Products
- 08 Non-Functional Design

Market Intelligence Scope

Market Intelligence turns broad market context into ETF candidates, detail review, and two-ETF comparison while keeping Admin maintenance separate.

- 01 Opening
- 02 Product Foundation

Dashboard Entry

Market Dashboard

01 Market Dashboard

Research starts from market breadth, sectors, indices, watchlist preview, and All ETFs entry.

Conclusion: the dashboard is the module landing page, not a transaction page.

02 Loading Skeleton

Cards, lists, quote areas, and dashboard regions keep layout stable while data loads.

Conclusion: loading is explicit and reviewable instead of showing empty content.

Loading Skeleton

- 02 Product Foundation
- 03 Core Modules
- 04 Market Intelligence
- 05 Portfolio Intelligence
- 06 AI Advisory
- 07 Structured Products
- 08 Non-Functional Design

Failure & Recovery

Load Error

01 Load Error

A clear failure message and retry action keep the state recoverable.

Conclusion: users can distinguish network failure from no-data results.

02 All ETFs Screener

Search, count, filter entry, ETF list, watchlist star, and Admin-only Add ETF appear together.

Conclusion: broad market interest becomes a concrete ETF candidate.

All ETFs Screener

- 05 Portfolio Intelligence
- 06 AI Advisory
- 07 Structured Products
- 08 Non-Functional Design

Search Refinement

Filter & Sort Sheet

01 Filter & Sort Sheet

Sort, asset class, region, sector, issuer, currency, and active filter count are handled in one sheet.

Conclusion: the screener supports narrowing without leaving the ETF list.

02 Empty State

No matching ETFs is separated from system error and offers Clear filters as recovery.

Conclusion: empty results are actionable and low-friction.

Empty State

Detail Research

ETF Detail

01 ETF Detail

Header, price change, time-range chart, watchlist toggle, Quick Compare, metrics, classification, and news sit in one research view.

Conclusion: detail supports focused research before any decision support.

02 Compare Picker

The second ETF is selected through search before entering comparison.

Conclusion: comparison is intentional and limited to a clear two-ETF path.

ETF Compare

ETF Compare

READING PATH

ETF Compare

- 01 Two ETF header cards establish context before metrics.
- 02 Normalized price curve makes performance visually comparable.
- 03 Aligned return, risk, fee, and attribute rows support product selection.
- 04 Boundary remains research and decision support, not execution.

Market User Stories

M-1 Browse ETF Detail

NEED

Enter ETF detail from Watchlist Preview, sector themes, or watchlist entries.

VALUE

Quickly obtain complete research context for an ETF of interest.

- Candlestick chart
- Risk metrics
- AI score
- Watchlist action

M-2 Search and Filter ETFs

NEED

Use keyword matching and filters to find a target ETF and open detail.

VALUE

Convert a fuzzy research need into a concrete ETF candidate.

- Keyword search
- Filter sheet
- Result count
- Empty-state recovery

- 01 Opening
- 02 Product Foundation
- 03 Core Modules
- 04 **Market Intelligence**
- 05 Portfolio Intelligence
- 06 AI Advisory
- 07 Structured Products
- 08 Non-Functional Design

Market User Stories

M-3 Compare ETFs

NEED

Tap Compare on ETF detail, choose a second ETF, and review aligned metrics.

VALUE

Support product selection decisions before any execution boundary.

- Second ETF picker
- Normalized curve
- Fee and risk rows
- Two-ETF limit

M-4 Maintain ETF List

NEED

Use Add ETF by ID to add a new ticker and maintain the searchable universe.

VALUE

Keep user-facing ETF coverage complete and traceable.

- Admin-only entry
- Ticker preview
- Add to platform
- Audit boundary

Market Acceptance Criteria

Acceptance standard

Market Intelligence is accepted when discovery, detail research, comparison, Admin access, and disclosure states can be reviewed end to end.

01

UI Coverage

Dashboard, screener, ETF detail, compare, loading, retryable error, and empty state are all represented.

MUST PASS

02

User Flow

Users can enter ETF detail from dashboard / watchlist / sector context and continue into compare.

MUST PASS

03

Search Logic

Keyword, category, region, sector, issuer, currency, sorting, active badges, and result count update together.

MUST PASS

04

Comparison

Two selected ETFs show normalized curve plus aligned return, risk, fee, and attribute metrics.

MUST PASS

05

Admin Control

Add ETF by ID is visible and accessible only to Admin role, not normal User role.

MUST PASS

06

Disclosure

Market pages show delayed-data and non-execution boundaries, including HKEX 15-minute delayed-data disclosure.

MUST PASS

Review conclusion

The module is rigorous enough for prototype delivery review when the reviewer can verify screen coverage, role isolation, state handling, and compliance boundaries without relying on unstated behavior.
