E. View the operations pages	4
Acceptance Criteria	5

Module Overview

Admin Portal is the operations console behind the client application. This module proves that the portal and mobile app use the same backend resources: changes to **ETF Catalogue** and **Model Portfolios** can be verified after refreshing the mobile app, while administrators can monitor platform status through **Dashboard**, **Users** and **User Portfolios**.

User Story / Video Index

Story	Video theme	Core path	Video
US-ADM-01	Admin Functional Acceptance	Dashboard + ETF Catalogue + Model Portfolios + operational visibility	Video

Shared Terminology

UI original text	Document meaning
Admin Portal	Operations console for internal administrators
Dashboard	Platform data and resource overview page
ETF Catalogue	Admin page for managing the ETF universe available to clients
Add by Ticker	The process of quickly adding ETFs through ticker lookup
Add ETF manually	Workflow in which the administrator enters all required ETF fields
Model Portfolios	Admin page for managing client Model Portfolio templates
Users	Page to search and view user accounts, verifications, status and risk profiles
User Portfolios	Operations page for viewing My Portfolios created by users
published / draft / hidden	The publishing status of the Model Portfolio; only published is visible to clients
active / inactive	Whether the ETF belongs to the client's active product universe status

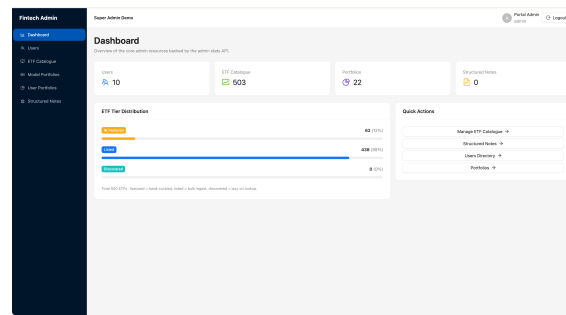

User Story 1 - Maintain and verify client content through Admin Portal

Story ID: US-ADM-01 **User story:** As an administrator, I want to maintain the ETF catalog and Model Portfolio templates and validate changes on mobile while viewing user and portfolio operational information from a unified backend. **Video:** [US-ADM-01 Acceptance Video](#)

Walkthrough

A. View Dashboard

1. Log in to the **Admin Portal** and open the **Dashboard**.
2. Display overview data such as total users, ETF catalogue size, user portfolios, structured notes, and ETF tier distribution, indicating that these resources come from the backend shared with the mobile app.

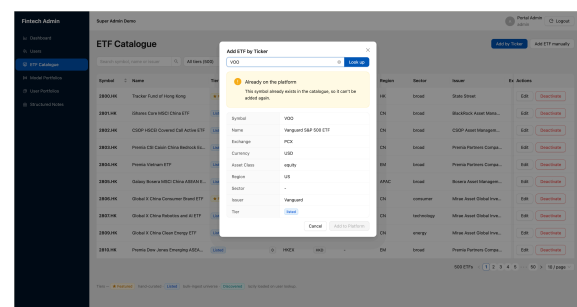

ADM-US1-01

ADM-US1-01 — Dashboard A complete overview of major counters, ETF tier distributions and recent activity.

B. Add an ETF and verify it in the mobile app

- First search for a test ETF that does not currently exist or is not enabled in the iOS simulator, and record the baseline status of the ETF that cannot be found.
- Switch to **Admin Portal > ETF Catalogue**. Show search by symbol/name/issuer and filters for tier and asset class.
- Display the exchange, currency, asset class, region, sector, issuer, expense ratio and other fields in the catalog.
- Add a test ETF using **Add by Ticker** or **Add ETF manually**. If using manual process, fill in symbol, name, exchange, currency, asset class, region, sector, issuer, inception date, expense ratio and tier.
- Return to the simulator, refresh the ETF search/list, and confirm that the same ETF appears.

ETF Catalog Listing and Filtering

Add by Ticker Duplicate record verification

ETF Catalog Listing and Filtering — ETF Catalogue list, search, tier/asset class filters, and ETF maintenance fields.

Add by Ticker Duplicate record verification — Add by Ticker displays duplicate record verification for an existing V00; this picture only proves the verification behavior and is not used as evidence of successful ETF creation.

C. Deactivate an ETF and verify it in the mobile app

8. In **ETF Catalogue**, select a test ETF that is currently searchable in the mobile app and set it to inactive/deactivated.
9. Return to the simulator, refresh the ETF search/list, and confirm that the ETF no longer appears as an active product.

D. Modify Model Portfolios and verify the change in the mobile app

10. First open a published Model Portfolio in the simulator and record its title, display order, risk band, summary and ETF allocations baseline.
11. Switch to **Admin Portal > Model Portfolios**. Display template key, display order, title, risk band, return range, horizon, summary, reference note, status and ETF allocations.
12. Edit a field that is easily identifiable and appropriate for the presentation, such as title, display order, risk band, summary, or allocation. If you modify allocation, confirm that the total weight is 100%. Save and keep the template as **published**.
13. Return to the simulator, refresh or reopen the Model Portfolio page, and confirm that the client displays the latest configuration.
14. Optional supplementary release boundary: change the dedicated test template to **draft** or **hidden**, refresh the client to confirm that it no longer appears; then restore the test data to avoid affecting subsequent demonstrations.

Order	Key	Title	Risk	Return	Horizon	Elaboration	Reference	Status
1	101	Active Income	Low	5-8% p.a.	1-3 years	100% US Govt Bonds	Reference: Vanguard US Bond Index	Published
2	102	Multi-Sector Balance	Low-Mid	6-9% p.a.	3-7 years	40% US Govt, 30% US Corp, 20% Int'l, 10% Bonds	Reference: Ray Dalio All Weather	Published
3	103	Global Core	Low	4-6% p.a.	5-10 years	60% US Govt, 40% Int'l	Reference: iShares Core Global Bond	Published

Model Portfolios Management List

Field	Value
Title	Active Income
Risk Band	Low
Return Range	5-8% p.a.
Horizon	1-3 years
Summary	100% US Govt Bonds
Reference Note	Reference: Vanguard US Bond Index
ETF Allocation	100.00%

ADM-US1-05

Model Portfolios Management List — Model Portfolios management list, showing template, display order, risk, status and maintenance operation entry.

ADM-US1-05 — Create Model Portfolio form, showing main configuration fields, ETF allocations and **Total 100.00%**; publishing status and saved client results still need to be continuously verified in the video.

E. View the operations pages

15. Open **Users** to display search, role/status filters, verification status, account status, risk profile, last login, and created date. Use test users or redact PII.
16. Open **User Portfolios** and display owner, base currency, objective, horizon, holdings count and created time.

ADM-US1-07

Users operation list — Users operations list and filter area; identifiable emails are redacted.

ADM-US1-07 — User Portfolios operational list, including search / filters, owner, base currency, objective, horizon, holdings and created time.

Acceptance Criteria

ID	Requirement	Reference	Ownership	Priority
ADM-US1-AC01	Dashboard displays an overview of the platform returned by the current backend, including currently available indicators in users, ETF catalogue, user portfolios, structured notes and ETF tier distribution.	US-ADM-01	Integration	Must
ADM-US1-AC02	ETF Catalogue supports searching by symbol, name or issuer, and supports the tier and asset-class filters provided by the current implementation.	US-ADM-01	Integration	Must
ADM-US1-AC03	ETF records display fields required for maintenance such as exchange, currency, asset class, region, sector, issuer, and expense ratio.	US-ADM-01	Integration	Must
ADM-US1-AC04	Administrators can create a valid ETF record through Add by Ticker or Add ETF manually.	US-ADM-01	Integration	Must
ADM-US1-AC05	A test ETF that was absent from the mobile app before creation can be found after it is added in Admin Portal and the mobile search/list is refreshed; its symbol and name match the admin record.	US-ADM-01	Integration	Must

ADM-US1-AC06	Administrators can deactivate an active ETF; after deactivation and a mobile-app refresh, the ETF no longer appears in the active product universe.	US-ADM-01	Integration	Must
ADM-US1-AC07	ETF addition or deactivation request cannot be submitted repeatedly during the process, and no duplicate records or conflict status will be generated after completion.	US-ADM-01	Integration	Must
ADM-US1-AC08	Model Portfolios supports maintaining template key, display order, title, risk band, return range, horizon, summary, reference note, status and ETF allocations.	US-ADM-01	Integration	Must
ADM-US1-AC09	Model Portfolio allocation can only be saved or published as a valid template if the total weight is 100%.	US-ADM-01	Integration	Must
ADM-US1-AC10	Changes made in Admin Portal to the title, order, risk band, summary or allocation of a published Model Portfolio appear after refreshing or reopening it in the mobile app.	US-ADM-01	Integration	Must
ADM-US1-AC11	Only the published Model Portfolio is visible to the client; the draft or hidden template does not appear in the client directory.	US-ADM-01	Integration	Must
ADM-US1-AC12	The client displays the current Model Portfolio configuration, without using hard-coded content or the last opened template state.	US-ADM-01	Integration	Must
ADM-US1-AC13	Users supports search and role/status filters, and displays currently available verification status, account status, risk profile, last login and created date.	US-ADM-01	Integration	Must
ADM-US1-AC14	User Portfolios displays the currently available fields such as owner, base currency, objective, horizon, holdings count and created time.	US-ADM-01	Integration	Must
ADM-US1-AC15	Users and User Portfolios are used for operational visibility and troubleshooting. Ordinary user positions are not modified in this story.	US-ADM-01	Integration	Must

ADM-US1-AC16	Every admin change that affects the client is verified by refreshing the simulator or re-opening the page; an admin Toast alone is not sufficient evidence of success.	US-ADM-01	Integration	Must
ADM-US1-AC17	Videos and screenshots use test data or redact personal information such as email addresses and portfolio owners.	US-ADM-01	Integration	Must
