Module Overview

The Portfolio module provides research-only workflows: discover **Model Portfolio**, maintain **My Portfolio**, generate **AI Portfolio Recommendation**, analyze portfolio drafts, and review saved **My Portfolio** against historical **Baseline Snapshot**. The module is organized by three tabs: **Recommended** is used to browse administrator-maintained Model Portfolios and start the recommendation quiz; **My portfolios** is used to create, view, edit, delete, analyze and review user-saved portfolios; **Watchlist** is used to view and remove Model Portfolios saved for future reference.

Scope: The forecasts, analysis, recommendations and **Suggested actions** in this module are for research only, do not guarantee returns, and do not trigger brokerage orders or trade execution.

User Story / Video Index

Story	Video theme	Core path	Video
US-PORT-01	Explore and save Model Portfolio	Recommended -> Model Portfolio -> Watchlist / My Portfolio	Video
US-PORT-02	Create, edit and maintain My Portfolio	My portfolios -> Edit / Baseline snapshots	Video
US-PORT-03	Generate AI Portfolio Recommendation	Find Your Ideal Portfolio -> Portfolio recommendation	Video
US-PORT-04	Analyze Portfolio and review AI suggestions	Draft Portfolio -> Analysis -> Suggestions	Video
US-PORT-05	Review based on Baseline Snapshot	Portfolio Review -> Baseline -> Analysis -> Suggestions	Video

Shared Terminology

UI original text	Document meaning
Model Portfolio	A portfolio template maintained and published by the administrator, not a user-persistent configuration
My Portfolio / My portfolios	Research portfolios created and saved by users, and their list tags
Watchlist	A list of Model Portfolios saved by the user for future reference
Add to My Portfolio	Convert a Model Portfolio or Recommendation to a new one or merge it into an existing My Portfolio
Baseline Snapshot	A reference configuration of holdings, quantities, values and weights saved by a My Portfolio at a specific time
Baseline History / Baseline snapshots	Manage the history drawer/page of Baseline Snapshots
Analysis Workspace	A workspace that performs the Holdings, Analysis, Diagnosis, and Suggestions processes on portfolio work drafts
Suggested actions	Preview of algorithmically generated quantitative adjustments; whether it can be edited or applied depends on the source

Portfolio Review	Workflow to compare the current My Portfolio with the selected Baseline Snapshot
Recommendation Build	Displays Recommendation risk profiling, screening, optimization, candidate scope and warnings
Data coverage / Unavailable / Partial	Explicit boundary states when data is incomplete or metrics are unavailable

User Story 1 - Explore and save Model Portfolio

Story ID: US-PORT-01 **User story:** As a user, I would like to examine a selected Model Portfolio, understand its configuration and illustrative forecasts, save it for later reference, and use Add to My Portfolio. **Video:** [US-PORT-01 Acceptance Video](#)

Walkthrough

1. Open **Portfolio > Recommended** and browse the Model Portfolio cards and their **Reference** descriptions.
2. Open a Model Portfolio and view return, risk, duration, allocation, and ETF allocations.
3. Browse **Projected Asset Growth**, manipulate time ranges and historical data points, and view available backtest and data coverage.
4. Save the Model Portfolio to **Watchlist** and confirm that it can be reopened or removed from **Watchlist**.
5. Select **Add to My Portfolio** to review or adjust amounts, weights and shares in **Visual** and **ETF list** modes.
6. Create a new My Portfolio using **Add as new** and open it from **My portfolios** to confirm.
7. Use **Add to existing** to add the configuration to the existing My Portfolio, and confirm that the position results are updated.
8. Select **Start analysis** from the Model Portfolio to view the read-only analysis and recommendation process.

PORT-US1-01

PORT-US1-02

Model Portfolio ETF allocation

PORT-US1-01 — Recommended catalogue, recommendation quiz entry, Model Portfolio cards, allocation mix and Reference.

PORT-US1-02 — Anchor Income Model Portfolio details, including return/risk/horizon, Reference, allocation map and projection entries.

Model Portfolio ETF allocation — Anchor Income's ETF allocation list, ETF metadata, target weights and Total 100%.

PORT-US1-03

PORT-US1-04

PORT-US1-05

PORT-US1-03 — Projected Asset Growth completed state, including history, P50, P25-P75,

P2.5-P97.5, Today crosshair, summary and **Partial** data warning.

PORT-US1-04 — Saved **Anchor Income** Model Portfolio in **Watchlist**, including saved count, key facts, allocation and **Reference**.

PORT-US1-05 — Visual editor for **Add to My Portfolio**, including allocation overview, total portfolio value, sector weights and two save targets.

Add to My Portfolio ETF list editor

Add to My Portfolio ETF list editor — The same configuration switched to the direct-share editor after switching to **ETF list**, showing industry groups, ETF rows and share steppers.

Acceptance Criteria

ID	Requirement	Reference	Ownership	Priority
US1-AC01	The Portfolio title and three tabs - Recommended, My portfolios, Watchlist - are visible, with Recommended selected.	US-PORT-01	Integration	Must
US1-AC02	Each loaded Model Portfolio card uses back-end data to display the title, return range, risk level label, duration, number of asset classes, and asset allocation visualization.	US-PORT-01	Integration	Must
US1-AC03	Each Model Portfolio card displays the Reference description corresponding to the Model Portfolio.	US-PORT-01	Integration	Must

US1-AC04	View details opens the selected Model Portfolio rather than another catalogue item.	US-PORT-01	Integration	Must
US1-AC05	Display the loading status when opening or refreshing the Model Portfolio directory for the first time; after completion, replace the placeholder with the currently returned Model Portfolio.	US-PORT-01	Integration	Must
US1-AC06	The details header displays the title, return, risk, term, and summary of the selected Model Portfolio.	US-PORT-01	Integration	Must
US1-AC07	The detail fact values are consistent with the catalog card and current Model Portfolio data, and do not inherit the contents of the previously opened Model Portfolio.	US-PORT-01	Integration	Must
US1-AC08	Reference descriptions are displayed in a dedicated source/reference style and are consistent with the description on the catalog card.	US-PORT-01	Integration	Must
US1-AC09	The configuration card shows the asset class groupings and their ETF codes; the number of ETFs and number of asset classes shown are consistent with the details returned.	US-PORT-01	Integration	Must
US1-AC10	The ETF configuration area shows Total 100%, with each row displaying the ticker, name, asset class label, target weight, and available issuer/last price/1-year return metadata.	US-PORT-01	Integration	Must
US1-AC11	Selecting an ETF row opens the matching ETF details; returning closes only the detail overlay without losing the Model Portfolio state.	US-PORT-01	Integration	Must
US1-AC12	After returning from ETF details, the current Model Portfolio details remain, and the configuration content and loaded status remain unchanged.	US-PORT-01	Integration	Must
US1-AC13	The loading status clearly indicates that a Monte Carlo simulation is running; the graph must not be displayed with made-up points until data is available.	US-PORT-01	Integration	Must
US1-AC14	Charts differentiate between historical, P50 forecast, P25–P75 and P2.5–P97.5 intervals, Today, initial value, axis labels, and forecast labels.	US-PORT-01	Integration	Must

US1-AC15	The summary values below the chart are consistent with the chart's starting value, allocation period, P50 endpoint, and P2.5–P97.5 range.	US-PORT-01	Integration	Must
US1-AC16	Horizontal dragging changes the visible timeline while keeping the view within the available historical/forecast range.	US-PORT-01	Integration	Must
US1-AC17	Pinch changes the visible time window; zooming to the boundaries does not display data outside the available date range, and axis labels and plotted values do not extend beyond the chart area.	US-PORT-01	Integration	Must
US1-AC18	Selecting a valid historical point displays a crosshair for its time and value. Backtesting is available only for historical data points, not future forecast points.	US-PORT-01	Integration	Must
US1-AC19	Generate backtest shows the loading status and then adds the backtest percentile range/median and actual series with updated legend.	US-PORT-01	Integration	Must
US1-AC20	Hide backtest removes the generated backtest, but does not remove the original history or forecast.	US-PORT-01	Integration	Must
US1-AC21	When the forecast status is Partial, the corresponding Data coverage is displayed and the current Model Portfolio's available data continues to be used; chart results from other Model Portfolios are not reused.	US-PORT-01	Integration	Must
US1-AC22	Forecasts are expressly described as indicative/research only and are not to be represented as guaranteed forecasts.	US-PORT-01	Integration	Must
US1-AC23	The details control changes from a hollow star to a solid star only after the save request is successful.	US-PORT-01	Integration	Must
US1-AC24	The Watchlist count is incremented and the Model Portfolio appears in the Watchlist with the same title, facts, configuration, and Reference.	US-PORT-01	Integration	Must
US1-AC25	A saved Model Portfolio can be opened from the Watchlist.	US-PORT-01	Integration	Must

US1-AC26	Removing a saved Model Portfolio causes it to disappear from the Watchlist and decrement the count; when there are no more saved Model Portfolios, an explicit No portfolios saved status is displayed.	US-PORT-01	Integration	Must
US1-AC27	After returning to Recommended and opening the same Model Portfolio again, its star status will be consistent with the final saved status in the Watchlist.	US-PORT-01	Integration	Must
US1-AC28	The Add to My Portfolio page opens for the selected Model Portfolio and displays the configuration overview, Model Portfolio title, risk/reward context, and default modeling amounts.	US-PORT-01	Integration	Must
US1-AC29	Modifying the total value will recalculate the ETF amount and quantity while maintaining the current normalized allocation weight.	US-PORT-01	Integration	Must
US1-AC30	Dragging the industry boundary only changes two adjacent groups; continuing to drag after reaching the draggable boundary will no longer reduce the grouping, and each grouping will not have negative weight, and the sum will remain 100%.	US-PORT-01	Integration	Must
US1-AC31	Dragging an ETF to split changes the ETFs within that group, keeping the group sum unchanged, and updating the within-group and overall allocation percentages.	US-PORT-01	Integration	Must
US1-AC32	When switching from Visual to List mode, the current amount and weight will be converted into ETF shares according to the latest price displayed on the interface; modifying the share will recalculate the total value, group weight, ETF weight and configuration visualization.	US-PORT-01	Integration	Must
US1-AC33	When switching back to Visual mode from List, the current share will be converted into the corresponding total amount and normalized weight; repeated switching will not lose the latest edits, and neither mode allows negative shares or negative weights.	US-PORT-01	Integration	Must

US1-AC34	When entering the confirmation step, the summary uses the amount, weight and share after the last Visual/List edit and does not revert to the initial configuration.	US-PORT-01	Integration	Must
US1-AC35	The confirmation step displays the target name, total amount added, ETF count, weight/amount/quantity added per ETF, and resulting quantity.	US-PORT-01	Integration	Must
US1-AC36	Confirm is disabled when the My Portfolio name is empty or a create request is in progress.	US-PORT-01	Integration	Must
US1-AC37	After successful creation, the new name appears in My portfolios; the number of positions is consistent with the confirmation summary, and the base currency is consistent with the selection when creating.	US-PORT-01	Integration	Must
US1-AC38	After reopening or refreshing, the position, quantity, configuration and value are still consistent with the confirmation results.	US-PORT-01	Integration	Must
US1-AC39	The UI states that a research-only My Portfolio was created and that no order, trade or execution occurred.	US-PORT-01	Integration	Must
US1-AC40	Confirm cannot be triggered repeatedly while the creation request is in progress; only one corresponding new My Portfolio will appear in the list after completion.	US-PORT-01	Integration	Must
US1-AC41	The target selector lists the current My Portfolio and displays each item's name, value, number of positions, and allocation summary.	US-PORT-01	Integration	Must
US1-AC42	Confirm is not available until the preview is loaded.	US-PORT-01	Integration	Must
US1-AC43	Preview showing existing value, ETF rows to be added, Model Portfolio weights, amounts, latest price, added quantity and resultant quantity.	US-PORT-01	Integration	Must
US1-AC44	Update the selected existing My Portfolio after confirmation; the new position results will be displayed after the list and details are refreshed.	US-PORT-01	Integration	Must

US1-AC45	After reopening the target, the existing codes in the preview show the combined quantity, and the new codes in the preview are shown as new positions.	US-PORT-01	Integration	Must
US1-AC46	When returning from the target selection or confirmation page, the current editing configuration remains unchanged; the final added result is consistent with the last confirmed preview.	US-PORT-01	Integration	Must
US1-AC47	Analysis Workspace opens in Holdings with the source title consistent with the selected Model Portfolio and preloaded with ticker, shares, value, and normalized weights configured by the Model Portfolio ETF.	US-PORT-01	Integration	Must
US1-AC48	Editing the Model Portfolio draft affects only the working copy and does not create or modify My Portfolio; because the source is not My Portfolio, recommendation results do not display the Apply to My Portfolio control.	US-PORT-01	Integration	Must
US1-AC49	Analyze draft portfolio uses the current edited draft of the Model Portfolio; the common behavior of analysis, diagnosis, and recommendations is consistent with User Story 4, and old results from other sources are not reused.	US-PORT-01	Integration	Must

User Story 2 - Create, edit and maintain My Portfolio

Story ID: US-PORT-02 **User story:** As a user, I would like to create and maintain a saved My Portfolio of ETFs, including their holdings and Baseline Snapshot history. **Video:** [US-PORT-02 Acceptance Video](#)

Walkthrough

1. Open Portfolio > My portfolios, view saved portfolios, and enter New Portfolio.
2. Enter a name and base currency, add initial ETF holdings, then create and open a new My Portfolio.
3. View My Portfolio's overview, allocations, forecasts and positions and save a Baseline Snapshot.
4. Enter Edit, adjust the position quantity, and use Add ETF or remove operation to update the portfolio.

- Return to Baseline snapshots to view and manage historical snapshots before and after editing.
- Remove a My Portfolio that is no longer needed from the list and make sure that other portfolios are not affected.

PORT-US2-01

PORT-US2-02

PORT-US2-03

PORT-US2-01 — My portfolios list, New entry, saved portfolios, value, holdings count, asset mix and drift.

PORT-US2-02 — New Portfolio initial state, containing name, base currency, Initial holdings, Add ETF entry and research-only boundaries.

PORT-US2-03 — My Portfolio Editing page, containing value/holdings/status, weights, share steps, remove controls and Add ETF.

PORT-US2-04

PORT-US2-04 — Baseline snapshots history, save entry, search, two saved snapshots and ETF details of the selected snapshot.

Acceptance Criteria

ID	Requirement	Reference	Ownership	Priority
US2-AC01	Shows loading status when opening or refreshing for the first time; when completed the list reflects the currently saved My Portfolio.	US-PORT-02	Integration	Must
US2-AC02	The new My Portfolio form provides HKD, USD, CNY, EUR and GBP as base currencies.	US-PORT-02	Integration	Must
US2-AC03	The create check button in the upper-right corner is disabled when the name is empty, an initial holding has a non-positive quantity, or a creation request is in progress.	US-PORT-02	Integration	Must
US2-AC04	The ETF selector supports code/name/issuer search, sorting indicators, applicable periods/dimensions, direction and reset; valid ETFs are added with the default values provided by the interface, and temporary ETFs are displayed as Added and cannot be selected repeatedly.	US-PORT-02	Integration	Must

US2-AC05	No matching search shows no results status; clear the search to restore the ETF ranking list and number of results.	US-PORT-02	Integration	Must
US2-AC06	Initial holdings supports +, -, direct input and deletion; these operations only modify the creation draft, and the final effective quantity is reflected in the creation result.	US-PORT-02	Integration	Must
US2-AC07	After creation, My Portfolio appears in the list with its name, total value, holding count, asset allocation, prior-day return when available, and Baseline Snapshot deviation when available.	US-PORT-02	Integration	Must
US2-AC08	After opening a new My Portfolio from the list, its name, base currency, initial holding quantities and values match the creation draft.	US-PORT-02	Integration	Must
US2-AC09	The creation process clearly states that it is creating a research-based My Portfolio and will not place orders.	US-PORT-02	Integration	Must
US2-AC10	The header displays the name, number of positions, total value and type of the selected My Portfolio; when the valuation data is incomplete, the corresponding Partial or Unavailable status is displayed.	US-PORT-02	Integration	Must
US2-AC11	The configured grouping, ETF quantity and position weight are consistent with the currently saved positions.	US-PORT-02	Integration	Must
US2-AC12	Shared prediction behavior matches User Story 1 and uses the saved value of this My Portfolio instead of the previously opened Model Portfolio.	US-PORT-02	Integration	Must
US2-AC13	Position rows display ticker, name, weight, shares, market cap, cost, and available ETF metadata; selecting a row opens the matching ETF overlay.	US-PORT-02	Integration	Must
US2-AC14	Saving creates a Baseline Snapshot of the current holdings, quantities, values and weights.	US-PORT-02	Integration	Must
US2-AC15	A success Toast appears and UAT Before Edit is added to Baseline History with its timestamp, value and top-weight context.	US-PORT-02	Integration	Must

US2-AC16	Opening a saved Baseline Snapshot displays its holding count, total value, status, and saved ETF quantities and weights.	US-PORT-02	Integration	Must
US2-AC17	The Edit page identifies the selected My Portfolio and displays the current value, number of positions, status and editable position lines.	US-PORT-02	Integration	Must
US2-AC18	+, -, valid positive quantity input and checkmark Submit will update and persist the selected ETF quantity; attempts to generate non-positive quantities will not commit the value.	US-PORT-02	Integration	Must
US2-AC19	After successful submission, refreshing or reopening will still display the updated quantity, value, weight and configuration.	US-PORT-02	Integration	Must
US2-AC20	Add ETF Search by symbol, name or issuer, and adjust sorting indicators, applicable dimensions and direction; number of results and no-result status are both visible.	US-PORT-02	Integration	Must
US2-AC21	ETFs already held are marked Added, disabled, and cannot be added again via the selector.	US-PORT-02	Integration	Must
US2-AC22	After selecting a valid ETF, the selector is closed and the ETF is added to the Edit list with default values; it still exists after reopening the details.	US-PORT-02	Integration	Must
US2-AC23	Removing an ETF removes only the ticker and refreshes the list, values, weights, and allocations.	US-PORT-02	Integration	Must
US2-AC24	Quantity editing, addition and removal only affect the corresponding ETF; unoperated positions retain the original quantity and cost information.	US-PORT-02	Integration	Must
US2-AC25	Edit can be closed directly when there are no modifications to be submitted, and no additional changes will be made to the saved positions.	US-PORT-02	Integration	Must
US2-AC26	Adds only one Baseline Snapshot per creation, selects and loads its details, and updates the save count.	US-PORT-02	Integration	Must
US2-AC27	Searches can be filtered by Baseline Snapshot tag, date, or top weight ETF symbol, and can be cleared.	US-PORT-02	Integration	Must

US2-AC28	Rename rejects empty names, persists valid new tags, and updates history and selected details.	US-PORT-02	Integration	Must
US2-AC29	Delete only removes the selected Baseline Snapshot and reduces the count; if the currently selected item is deleted, the page will no longer display its details, and the remaining valid items will be selected or display an empty status.	US-PORT-02	Integration	Must
US2-AC30	UAT Before Edit retains the positions before operation 2.4, and UAT Current State is consistent with the current My Portfolio after operation 2.4.	US-PORT-02	Integration	Must
US2-AC31	After reopening Baseline snapshots, the retained Baseline Snapshot and rename results still exist, and the deleted temporary Baseline Snapshot no longer appears.	US-PORT-02	Integration	Must
US2-AC32	A My Portfolio with no holdings can still be opened; its details clearly show no holdings, unavailable allocation and unavailable forecast states, without presenting zero values or sample allocations as valid results.	US-PORT-02	Integration	Must
US2-AC33	Removal requires naming My Portfolio and stating irrevocable destructive confirmation; My Portfolio remains unchanged after cancellation.	US-PORT-02	Integration	Must
US2-AC34	Remove this My Portfolio from the list after confirmation without deleting other My Portfolios.	US-PORT-02	Integration	Must

User Story 3 - Generate AI Portfolio Recommendation

Story ID: US-PORT-03 **User story:** As a user, I want to answer the fit questionnaire, get interpretable ETF recommendations, check the generated results and save to My portfolios. **Video:** [US-PORT-03 Acceptance Video](#)

Walkthrough

1. Open Find Your Ideal Portfolio from Portfolio > Recommended, complete the four-question questionnaire and check the response progress.
2. Submit the answer and observe the generation progress and pending states of the Recommendation.

tion.

3. View the resulting risk profile, projection, portfolio metrics, recommendation build, and ETF holdings.
4. Return to the questionnaire to adjust an answer, regenerate and confirm that the results are updated with the new answer.
5. Select Add to My Portfolio, review the configuration, and select Add as new or Add to existing.
6. Open the target portfolio from My portfolios and confirm that the Recommendation has been saved as selected.

Recommendation quiz initial state

PORT-US3-01

PORT-US3-02

Recommendation quiz initial state — Find my portfolio The starting state of the questionnaire, showing the four-step structure, 0/4 answered, Goal options and Next that has not been enabled.

PORT-US3-01 — The progress status after the questionnaire enters Question 2, showing the completed Goal, current Time step, 1/4 answered and horizon options.

PORT-US3-02 — Step 4 of Recommendation being generated, showing progress, pending header/holdings, loading projection, and pending metrics.

PORT-US3-03

Recommendation metrics and build

Recommendation build holdings table

PORT-US3-03 — Generates the completed Growth Focus ETF Portfolio, including AI-assisted/risk/currency/holdings headers, projection and Add to My Portfolio.

Recommendation metrics and build — Recommendation’s expected return, volatility, Sharpe, asset mix, generated weights and Recommendation build.

Recommendation build holdings table — How this was built screening process, holdings table, portfolio characteristics and constraint notes.

Recommendation ETF holdings

PORT-US3-04

Recommendation Add to My Portfolio editor

Recommendation ETF holdings — Generates the full set of ETF holdings, target weights, deterministic-engine disclosure and **Back to adjust answers**.

PORT-US3-04 — Recommendation's **Add to existing** target selection page, showing the optional My Portfolio, value, holdings count, asset mix and drift.

Recommendation Add to My Portfolio editor — Recommendation After entering the Visual editor after **Add to My Portfolio**, you can choose **Add to existing** or **Add as new** in the next step.

Acceptance Criteria

ID	Requirement	Reference	Ownership	Priority
US3-AC01	The questionnaire shows exactly four progress steps and the current number of questions/answered.	US-PORT-03	Integration	Must
US3-AC02	Each question displays supporting text and selectable options with labels, details, icons and risk/benefit context.	US-PORT-03	Integration	Must
US3-AC03	Next/See recommendation is always disabled until the current question has an answer.	US-PORT-03	Integration	Must
US3-AC04	Only one option can be selected per question, and Back/Next navigation retains all previous answers.	US-PORT-03	Integration	Must
US3-AC05	After completing the questionnaire, the results page displays the risk level derived from the combination of answers—Conservative, Moderate, Growth, or Opportunistic—and enters the recommendation generation state corresponding to that level.	US-PORT-03	Integration	Must
US3-AC06	The page immediately enters a visible generation state; stale recommendations from a previous run must not appear, even briefly.	US-PORT-03	Integration	Must
US3-AC07	Progress communicates four stages: Screen ETF universe, Optimize allocation, Draft AI explanation, and Check wording.	US-PORT-03	Integration	Must
US3-AC08	Pending header, forecast, build, explanation and ETF rows are clearly marked as generating/pending rather than populated with fabricated final values.	US-PORT-03	Integration	Must

US3-AC09	The save operation is not available until there is a clear Recommendation result.	US-PORT-03	Integration	Must
US3-AC10	The header displays the title of the generated results, risk level, base currency, number of positions and AI-assisted/research summary only.	US-PORT-03	Integration	Must
US3-AC11	Expected annualized returns, volatility, Sharpe ratio, asset class allocation, number of ETFs, and generated weights are derived from returned recommendations.	US-PORT-03	Integration	Must
US3-AC12	Forecasts are calculated based on the generated ETF weights and modeled amounts and meet the interaction criteria established in User Story 1.	US-PORT-03	Integration	Must
US3-AC13	Recommendation Build displays this run's risk profile, screening and optimization summary, as-of date, candidate scope, exclusion reasons and warnings, and corresponds to the final ETF holdings.	US-PORT-03	Integration	Must
US3-AC14	Description markup is AI-generated and renders paragraphs, emphasis, bullets, quotes, and tables without displaying the original Markdown markup.	US-PORT-03	Integration	Must
US3-AC15	The explanation matches this Recommendation Build and its generated holdings, and clearly states the historical-data, research-use and no-return-guarantee boundaries.	US-PORT-03	Integration	Must
US3-AC16	ETF row shows ticker, name, asset class, generated target weight, and progress; shows weights totaling 100% within rounding tolerance.	US-PORT-03	Integration	Must
US3-AC17	Return to the questionnaire and keep the current answers. Regenerating clears previous suggestions and displays the build status before new results.	US-PORT-03	Integration	Must
US3-AC18	Recommendation is marked throughout as AI-assisted and for research only; it will not be saved to My portfolios until the user explicitly selects Add to My Portfolio and completes the confirmation.	US-PORT-03	Integration	Must

US3-AC19	The add page uses the generated recommendation, modeled amount, base currency and latest available ETF prices.	US-PORT-03	Integration	Must
US3-AC20	Visual/List editing and both target options are compliant with Operations 1.5–1.7.	US-PORT-03	Integration	Must
US3-AC21	Confirmation is displayed when using Add as new and the new My Portfolio appears in My portfolios with the expected name, base currency and number of positions.	US-PORT-03	Integration	Must
US3-AC22	Use Add to existing to merge quantities: new codes are added and existing codes get the added quantity and weighted cost.	US-PORT-03	Integration	Must
US3-AC23	Only opening the add page or returning to Recommendation will not write to My portfolios; the corresponding save result will only be generated after the target selection and confirmation are completed.	US-PORT-03	Integration	Must

User Story 4 - Analyze Portfolio and review AI recommendations

Story ID: US-PORT-04 **User story:** As a user, I wish to analyze a working draft for My Portfolio or Model Portfolio, select important diagnostic issues, and review AI-assisted considerations and quantitative **Suggested actions**; when the source is My Portfolio, I can also edit and apply these actions. **Video:** [US-PORT-04 Acceptance Video](#)

Walkthrough

1. Select **Start analysis** from a My Portfolio to view and adjust draft positions as necessary.
2. Select **Analyze draft portfolio** to view Analysis overview, Holdings, Exposure breakdown and Data coverage.
3. Review and select the diagnoses you want the recommendations to cover, and then generate recommendations.
4. Review the selected diagnostic scope, AI considerations, candidate pool, and quantitative **Suggested actions**.
5. Review or adjust target shares for My Portfolio sources, apply scenarios and confirm portfolio updates.
6. Start Analysis Workflow again from the Model Portfolio and confirm that **Suggested actions** is a read-only result.

PORT-US4-01

PORT-US4-02

Analysis holdings table and exposure breakdown

PORT-US4-01 — Pre-analysis editable draft of Draft Portfolio > Holdings, including shares input and step controls, delete operations, Add ETF, not yet unlocked Analysis / Suggestions, and Analyze draft portfolio.

PORT-US4-02 — Draft Portfolio > Analysis, contains Data coverage, Analysis overview, score, value/positions, HHI, Effective N and multidimensional diagnostics.

Analysis holdings table and exposure breakdown — read-only Holdings table and Exposure breakdown in Analysis results; the table is not an editable Holdings draft before running the analysis.

PORT-US4-03

PORT-US4-04

PORT-US4-03 — Sector/Region/Currency of **Exposure** breakdown, and Found/Selected/Hidden counts, selected finding and generate action of **Diagnosis**.

PORT-US4-04 — selected diagnosis scope, AI **drafted** boundary, research consideration, candidate pool and quantitative **Suggested** actions preview in **Suggestions**.

Acceptance Criteria

ID	Requirement	Reference	Ownership	Priority
US4-AC01	Analysis Workspace opens in Holdings, identifies the source My Portfolio, and preloads its saved ETF holdings, quantities, costs, values and weights.	US-PORT-04	Integration	Must
US4-AC02	Analysis remains locked until an analysis exists; Suggestions remains locked until a suggestion exists.	US-PORT-04	Integration	Must
US4-AC03	+/- will update the draft immediately; direct input only displays a check mark when the value changes. After confirmation, values and weights are recalculated, old analysis/recommendations are cleared, and the saved My Portfolio is not modified.	US-PORT-04	Integration	Must
US4-AC04	Add ETF supports catalog search and sorting controls; duplicates are marked Added and cannot be added again, valid new ETFs can be added to the current draft.	US-PORT-04	Integration	Must
US4-AC05	Removing ETFs or Clear all only affects working drafts until you explicitly execute Apply to My Portfolio.	US-PORT-04	Integration	Must
US4-AC06	Analyze draft portfolio is disabled when the draft is empty; only progress is displayed during the analysis run and no second analysis operation is provided.	US-PORT-04	Integration	Must
US4-AC07	Analyze draft portfolio switches to the Analysis tab and continues to display progress until analysis of the current draft completes or fails.	US-PORT-04	Integration	Must

US4-AC08	The completed overview shows the total value/base currency, number of positions, HHI, Effective N, diversification, concentration, geography, FX, fee efficiency and liquidity information available for the current draft.	US-PORT-04	Integration	Must
US4-AC09	Unavailable indicators are displayed as Unavailable/—; if the available data is insufficient to form an overall score, the score is also displayed as Unavailable and must not be replaced by a zero value.	US-PORT-04	Integration	Must
US4-AC10	The Holdings table displays Symbol, QTY, COST/UNIT, MKT VALUE, WEIGHT and CCY and supports horizontal scrolling; unavailable values display —, and no placeholder return is shown.	US-PORT-04	Integration	Must
US4-AC11	Exposure breakdown displays Sector, Region and Currency and consistently switches between Pie and List using the same data.	US-PORT-04	Integration	Must
US4-AC12	Analytics disclaimers are always visible; when a response contains partial/unavailable metrics or warnings, the page displays a blue Data coverage indicating the affected data range without calling it an AI fallback.	US-PORT-04	Integration	Must
US4-AC13	The current result applies only to this draft; returning to Holdings and changing a quantity clears and relocks the old Analysis and Suggestions.	US-PORT-04	Integration	Must
US4-AC14	Diagnostic items display severity, title, metric/threshold and selection state; all returned items are selected by default.	US-PORT-04	Integration	Must
US4-AC15	The number, severity, and selection status of diagnostic items returned by the current analysis are consistent with the page count.	US-PORT-04	Integration	Must
US4-AC16	After switching diagnostic items, the Found/Selected/Hidden count is updated immediately; the diagnostic scope listed in the generated results only includes the items selected when submitting.	US-PORT-04	Integration	Must

US4-AC17	When zero items are selected, the UI instructs the user to select at least one item and Generate Recommendations from Selected is disabled.	US-PORT-04	Integration	Must
US4-AC18	Recommendation generation is disabled until analysis completes; while generation is running, only progress is shown and no second generation action is available.	US-PORT-04	Integration	Must
US4-AC19	The generation switches to Suggestions and displays four progress stages: Read selected diagnosis, Draft considerations, Apply safety guard, Prepare preview.	US-PORT-04	Integration	Must
US4-AC20	The results indicate the diagnostic items used to generate recommendations.	US-PORT-04	Integration	Must
US4-AC21	AI-generated considerations appear AI drafted, with hints about research use and what can go wrong with the AI.	US-PORT-04	Integration	Must
US4-AC22	Considerations only cover diagnostic items selected during submission; unselected diagnoses will not appear in the scope of this recommendation and corresponding considerations.	US-PORT-04	Integration	Must
US4-AC23	Each consideration presents observations, rationale, expected impact, confidence level, relevant questions, and wording for research purposes only, without order execution language.	US-PORT-04	Integration	Must
US4-AC24	Suggested actions displays feasibility, row count, turnover, new candidate count/symbols and risk level.	US-PORT-04	Integration	Must
US4-AC25	Each Suggested Action row displays the code/name, Held/New status, current share/weight, target share/weight, quantity and value difference, and Model target comparison.	US-PORT-04	Integration	Must
US4-AC26	Suggested actions supports scrolling through all Held/New rows and updates the corresponding quantity and value difference immediately after editing the target.	US-PORT-04	Integration	Must

US4-AC27	Recommendation candidate pool displays only ETF symbols that are allowed to be considered in the current recommendation process and corresponds to new candidates in Suggested actions .	US-PORT-04	Integration	Must
US4-AC28	Target share only accepts non-negative values and recalculates target weight, share difference, weight difference and value difference.	US-PORT-04	Integration	Must
US4-AC29	Reset clears user overrides and restores the target scenario originally provided by the preview.	US-PORT-04	Integration	Must
US4-AC30	Apply to My Portfolio is only enabled if the source is My Portfolio, the scenario is feasible, there are displayable action lines, the price query is completed and all positive targets have available prices; remains disabled if the conditions are not met.	US-PORT-04	Integration	Must
US4-AC31	Applying updates the saved holdings with the edited positive targets, preserves unaffected valid holdings, closes the workspace and refreshes the details.	US-PORT-04	Integration	Must
US4-AC32	Reopening proves that quantities and weights/values were updated; previous analysis/recommendations are no longer considered valid for the revised holdings.	US-PORT-04	Integration	Must
US4-AC33	Apply to My Portfolio cannot be triggered repeatedly while the request is in progress; after success, only one position update will be generated and the refreshed details will be returned.	US-PORT-04	Integration	Must
US4-AC34	Model Portfolio can be used as a draft source to complete the same Analysis Workflow for Holdings, Analysis, Diagnosis and Suggestions.	US-PORT-04	Integration	Must
US4-AC35	Suggestions displays the selected diagnostic scope, AI considerations and quantitative Suggested actions , and will not skip the results just because the source is Model Portfolio.	US-PORT-04	Integration	Must

US4-AC36	The Model Portfolio's Suggested actions are displayed as a read-only list with Current, Target, Change, and Value Difference viewable per row, but no Target shares input or step controls are provided.	US-PORT-04	Integration	Must
US4-AC37	Model Portfolio results do not display Reset or Apply to My Portfolio; closing the workspace does not modify the Model Portfolio, nor does it create or update the My Portfolio.	US-PORT-04	Integration	Must

User Story 5 - Review based on Baseline Snapshot

Story ID: US-PORT-05 **User story:** As a user, I want to compare today's My Portfolio with a valid historical Baseline Snapshot, understand configuration deviations, edit adjustments based on the Baseline Snapshot and apply them. **Video:** [US-PORT-05 Acceptance Video](#)

Walkthrough

1. Open **Portfolio Review** from a My Portfolio, browse the available Baseline Snapshots, and differentiate between **No changes** and Reviewable status.
2. Select a Baseline Snapshot with changes to view the portfolio summary and holdings drift.
3. Enter **Analysis** and read drift status, driver summary, allocation changes and ETF quantity changes.
4. Open **Suggestions**, review and adjust Baseline-based target shares as needed.
5. Select **Apply to My Portfolio**, return to the portfolio and confirm that the adjustment results have been updated.

PORT-US5-01

PORT-US5-02

PORT-US5-03

PORT-US5-01 — Portfolio Review > Baseline, showing also No changes snapshot, selected snapshot, ETF summary and Review allocation changes.

PORT-US5-02 — Current/baseline value, absolute drift and Holding drift table of the selected Baseline Snapshot, comparing Now, Baseline and Drift row by row.

PORT-US5-03 — Analysis of Baseline comparison, including status, allocation drift, current/baseline values, largest move and driver summary.

Baseline allocation and ETF movements

Baseline quantity changes

PORT-US5-04

Baseline allocation and ETF movements — Industry allocation changes, ETF movement detail and quantity-difference summary.

Baseline quantity changes — baseline/current/target quantities and value differences for each ETF in Quantity changes.

PORT-US5-04 — Editable baseline-based Recommended ETF changes, including target-share controls, Reset suggestion and Apply to My Portfolio.

Acceptance Criteria

ID	Requirement	Reference	Ownership	Priority
US5-AC01	Portfolio Review opens in the Baseline tab and lists only the snapshots saved by this My Portfolio.	US-PORT-05	Integration	Must
US5-AC02	The UI explains that a Baseline Snapshot is a saved reference configuration, not a manually configured target.	US-PORT-05	Integration	Must
US5-AC03	UAT Current State is visibly disabled/dimmed, marked No changes, and states that the current position is the same as the Baseline Snapshot.	US-PORT-05	Integration	Must
US5-AC04	When selecting UAT Before Edit first and then clicking on the unchanged Baseline Snapshot, UAT Current State will not be selected and the original selection will remain unchanged.	US-PORT-05	Integration	Must
US5-AC05	A Baseline Snapshot marked No changes does not provide access to Analysis, and the page states that its positions are consistent with the current status.	US-PORT-05	Integration	Must
US5-AC06	Even if Baseline Snapshot cannot be selected for review, Show ETF details can still be used for inspection.	US-PORT-05	Integration	Must
US5-AC07	Baseline Snapshot with changes becomes Selected and gets selected style.	US-PORT-05	Integration	Must
US5-AC08	Expanded details show saved ETF quantities and weights; collapsed only hides the details panel.	US-PORT-05	Integration	Must
US5-AC09	Deviation results list both new and removed ETFs, and cannot be omitted because a symbol only exists in the current position or Baseline Snapshot.	US-PORT-05	Integration	Must

US5-AC10	The deviation table, sorted by significant change, shows each code's Baseline Snapshot weight, current weight, quantity difference, and signed weight deviation.	US-PORT-05	Integration	Must
US5-AC11	The summary indicates the name, date, and total absolute deviation of the selected Baseline Snapshot; Review allocation changes is now enabled.	US-PORT-05	Integration	Must
US5-AC12	Analysis clearly indicates that the current position is being compared to the selected Baseline Snapshot.	US-PORT-05	Integration	Must
US5-AC13	Analysis displays the Within range, Monitor drift, or Review recommended status and displays the current value, Baseline Snapshot value, maximum change, and percentage point deviation.	US-PORT-05	Integration	Must
US5-AC14	Driver summary identifies the largest exposure increase/decrease and indicates whether price and/or quantity changes contributed.	US-PORT-05	Integration	Must
US5-AC15	Industry allocation changes summarizes Baseline Snapshot weights and current weights by ETF asset class and shows signed deviations.	US-PORT-05	Integration	Must
US5-AC16	ETF movement detail shows Baseline Snapshot weights, current weights and quantities, with a plain-language reason for each material movement.	US-PORT-05	Integration	Must
US5-AC17	Quantity changes displays the Baseline Snapshot quantity, current quantity, target quantity, unit difference and value difference for key rows.	US-PORT-05	Integration	Must
US5-AC18	Baseline Snapshot comparisons must not show AI flags such as AI-generated, AI drafted, etc., and are explicitly presented as configuration comparisons based on the selected snapshot.	US-PORT-05	Integration	Must
US5-AC19	Suggestions displays the target scenario only after the selected Baseline Snapshot preview finishes loading; a stale preview is not shown while loading or switching scope.	US-PORT-05	Integration	Must

US5-AC20	The scope card takes the Baseline Snapshot and reports the number of changed rows and the total number of rows.	US-PORT-05	Integration	Must
US5-AC21	The target row shows the current share/weight, Baseline Snapshot weight, calculated target share/weight, signed change, value difference, and Hold/Adjust status.	US-PORT-05	Integration	Must
US5-AC22	The default scenario generates reviewable target shares by the selected Baseline Snapshot; ETFs that do not exist in the Baseline Snapshot can appear as zero targets.	US-PORT-05	Integration	Must
US5-AC23	Target values are editable and non-negative, and displayed weights and differences recalculate immediately.	US-PORT-05	Integration	Must
US5-AC24	Reset suggestion removes overrides and restores the calculated default targets.	US-PORT-05	Integration	Must
US5-AC25	Apply to My Portfolio is disabled until target calculation completes and is enabled only when the target scenario is available.	US-PORT-05	Integration	Must
US5-AC26	After Apply to My Portfolio succeeds, the review closes and My Portfolio details refresh to show the updated saved holdings.	US-PORT-05	Integration	Must
US5-AC27	Reopening proves that target shares were applied and the previously selected Baseline Snapshot shows the updated comparison results.	US-PORT-05	Integration	Must
US5-AC28	Apply to My Portfolio cannot be triggered repeatedly while the request is in progress; only one position update will be generated after completion, and the same final status will be displayed when reopening the details and Portfolio Review.	US-PORT-05	Integration	Must
