Module Overview

The Login / Register module covers the two available authentication paths for non-logged-in users: registering a new account and completing email verification, and logging in using an existing account/email and password. The current source material records the two paths in the same video, so this module remains as a User Story.

Scope: Although **Google**, **Microsoft** and **Sign in with Apple** are displayed on the **Login** page, they are outside this acceptance scope. The accepted paths are **Register New Account** and standard email/password **Sign In**.

User Story Index

Story	User story	Core path
US-AUTH-01	Authentication Flow	Register New Account + email/ password Sign In

Shared Terminology

UI original text	Document meaning
Login	Authentication start page for users who are not logged in
Sign In	Use existing account/email and password to log in
Register New Account	Entry point from Login to the registration flow
Create Account	Registration page and submission action for display name, email and password
Verify Email	Page to enter the six-digit email verification code
Verify and Continue	Verify the six-digit code and complete the registration operation
Markets	The default landing page after successful registration or login

User Story 1 - Register a new account and log in using an existing account

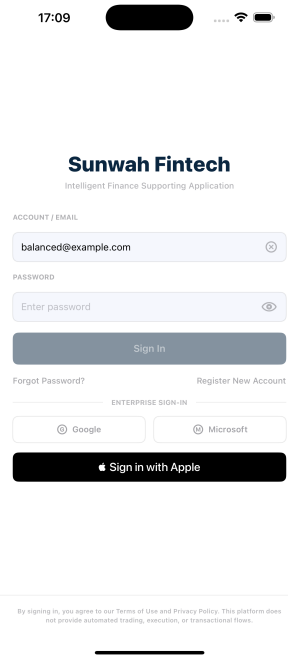

Story ID: US-AUTH-01 **User story:** As an unauthenticated user, I want to register a new account and verify my email, or sign in with an existing account/email and password, so that I can enter the application's **Markets** page.

Walkthrough

A. Login page and scope description

1. Open the application and stay on the **Login** page.
2. Display the account/email and password fields. After entering the password, tap the eye icon and confirm that the password can be shown and hidden.
3. Confirm that **Sign In** is disabled when either required field is empty and enabled after both fields are completed.

4. Briefly display **Google**, **Microsoft**, and **Sign in with Apple** to explain that they do not belong to the current acceptance path.

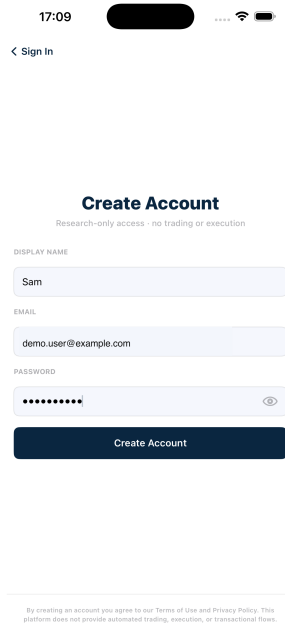

AUTH-US1-01

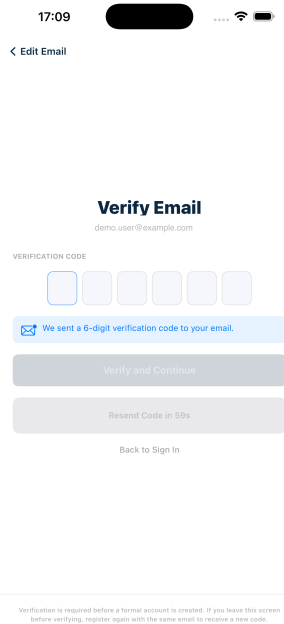

AUTH-US1-01 — The default state of the **Login** page, including account/email and password input boxes, **Sign In**, **Register New Account** and three other login entries.

B. Register a new account and verify email

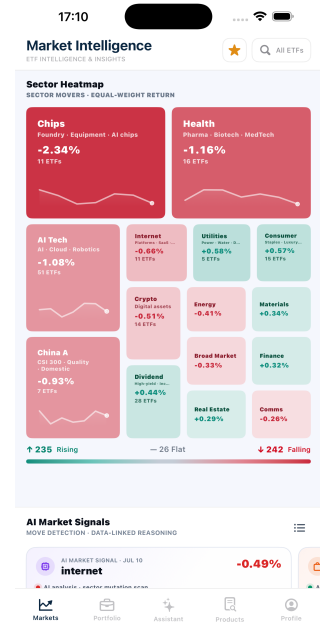

5. Click **Register New Account** to enter **Create Account**.
6. Enter display name, email and password. First use a password shorter than 8 characters to show the disabled state, then enter a valid password.
7. Click **Create Account**. Confirm that the application creates a pending registration, sends a six-digit verification code by email, and opens **Verify Email**.
8. Confirm that **Verify and Continue** is disabled when the code has fewer than six digits and enabled after a complete six-digit code is entered.
9. Click **Verify and Continue**. After successful verification, confirm that the account creation is completed, the user automatically logs in, and enters **Markets**.

AUTH-US1-02

AUTH-US1-03

AUTH-US1-04

AUTH-US1-02 — Valid **Create Account** form, including display name, redacted demo email, hidden password, and enabled **Create Account**.

AUTH-US1-03 — Initial **Verify Email** state, showing the redacted recipient email, empty code field, and disabled **Verify and Continue**. The video shows the completed six-digit code and submission continuously.

AUTH-US1-04 — After the new account is successfully verified, you will enter the **Markets** landing page; the bottom navigation remains in the screen to prove that you have left the authentication process.

C. Sign in with an existing account

10. Exit or reset to the **Login** page.
11. Enter the existing account/email and password; click **Sign In** after both fields are valid.
12. Display signing-in state; after successful authentication, confirm again and enter **Markets** by default.

Acceptance Criteria

ID	Requirement	Reference	Ownership	Priority
AUTH-US1-AC01	Unauthenticated users first see the Login page after opening the application.	US-AUTH-01	Integration	Must
AUTH-US1-AC02	Login provides two required fields: account/email and password. Password is hidden by default.	US-AUTH-01	Integration	Must

AUTH-US1-AC03	The eye icon can show or hide the password without clearing the entered value.	US-AUTH-01	Integration	Must
AUTH-US1-AC04	Sign In is not available when any required field is empty; the button is available after both fields are filled in.	US-AUTH-01	Integration	Must
AUTH-US1-AC05	Google , Microsoft and Sign in with Apple are not among the accepted working paths for this version.	US-AUTH-01	Integration	Must
AUTH-US1-AC06	Click Register New Account to open Create Account and provide the display name, email and password fields.	US-AUTH-01	Integration	Must
AUTH-US1-AC07	Create Account is not available when the registration form is missing any required field or the password is less than 8 characters.	US-AUTH-01	Integration	Must
AUTH-US1-AC08	Submitting a valid registration form creates one pending registration, sends a six-digit verification code, and opens Verify Email .	US-AUTH-01	Integration	Must
AUTH-US1-AC09	Verify and Continue is not available when the verification code is less than six digits; the button is available after six digits are entered.	US-AUTH-01	Integration	Must
AUTH-US1-AC10	A correct code completes account creation and signs the user in automatically; only one new account is created.	US-AUTH-01	Integration	Must
AUTH-US1-AC11	Newly registered users will enter the default Markets landing page.	US-AUTH-01	Integration	Must
AUTH-US1-AC12	Existing users can use account/email and password to submit Sign In .	US-AUTH-01	Integration	Must
AUTH-US1-AC13	The signing-in state is displayed when the login request is in progress, and the same login request will not be submitted repeatedly.	US-AUTH-01	Integration	Must
AUTH-US1-AC14	Enter the default Markets landing page after successful user authentication.	US-AUTH-01	Integration	Must
AUTH-US1-AC15	Videos and screenshots do not reveal real passwords, reusable verification codes, or personal information of non-test accounts.	US-AUTH-01	Integration	Must
